Noor Eyad Alshater

Cybersecurity | Security Operations & Penetration Testing

Email: nooralshate@gmail.com | Phone: +962 789 868 444 | Amman, Jordan – Open to Relocation
LinkedIn | Project Repository

PROFESSIONAL SUMMARY

Cybersecurity professional with over one year of combined hands-on experience gained through intensive national cybersecurity training, SOC simulations, security investigations, technical projects, and cybersecurity lab development. Experienced in SIEM monitoring, alert triage, log analysis, threat hunting, penetration testing, malware analysis, and digital forensics. Skilled in investigating simulated security incidents, identifying indicators of compromise, documenting findings, and providing remediation recommendations.

TECHNICAL SKILLS

Security Operations: SIEM Monitoring, Alert Triage, Log Analysis, Threat Hunting, Incident Investigation, IOC Identification, Incident Reporting

Security Frameworks: MITRE ATT&CK, Incident Response Fundamentals, Evidence Handling

Penetration Testing: Nmap, Metasploit, Burp Suite, Hydra, John the Ripper, Web Application Security

Malware & Digital Forensics: Static and Dynamic Malware Analysis, FTK Imager, Autopsy, ExifTool, Evidence Collection, File Hashing

Network Security: Wireshark, Network Traffic Analysis, Network Scanning, Cisco Networking Fundamentals

Operating Systems: Kali Linux, Windows, Linux CLI, VirtualBox

Risk & Reporting: Vulnerability Assessment, Risk Assessment, Security Reporting, Remediation Recommendations, GRC Fundamentals

EXPERIENCE

Cisco Networking Instructor *06/2026 – Present*
ByTeq Academy

- Deliver the Cisco NetAcad Networking Basics course through structured, screen-based video lessons covering essential networking concepts.
- Develop and organize course content aligned with the Cisco Networking Academy curriculum to support learner comprehension and exam readiness.
- Translate technical networking concepts into clear and practical educational explanations.

National Cybersecurity Center (NCSC) & IT Security C&T *07/2025 – 09/2025*
Masar Cybersecurity Training Program – Ethical Hacking & CTF Track (200 Hours) | Jordan

- Performed SIEM-based monitoring and log analysis using Splunk to investigate simulated brute-force, cross-site scripting, and command-injection activity.
- Investigated simulated security alerts, correlated log events, identified suspicious source IP addresses, and documented findings.
- Applied MITRE ATT&CK concepts during threat-hunting and incident-investigation exercises.
- Conducted vulnerability assessment and penetration-testing activities using Nmap, Metasploit, Burp Suite, Hydra, WPScan, enum4linux, and John the Ripper.
- Conducted static and dynamic malware-analysis exercises and identified relevant indicators of compromise.
- Produced structured security reports containing findings, severity assessments, technical evidence, and remediation recommendations.

IEEE Cybersecurity Society, TTU *07/2023 – 7/2026*

Public Relations Officer

- Organized cybersecurity workshops, awareness events, and technical sessions while coordinating activities across multidisciplinary teams.
- Created and managed digital content achieving 1.7M+ views in under one month, demonstrating communication, audience engagement, content strategy, and public relations skills

TECHNICAL PROJECTS

Cybersecurity Lab Environment – EduKernel Suite

Graduation Project | 02/2025 – 06/2026 | Project Repository

- Co-developed and deployed a multi-VM cybersecurity lab using Kali Linux, Windows 7, and Windows 10 to support penetration testing, malware analysis, digital forensics, reverse engineering, web security, and network-security exercises.
- Personally prepared and configured the Windows 7 malware-analysis environment, integrating tools including Immunity Debugger with Mona.py and IDA Free to support memory-exploitation and reverse-engineering exercises.
- Built automated Bash deployment scripts with error handling and centralized logging to standardize security-tool provisioning.
- Implemented VirtualBox snapshots and preconfigured environments to simplify lab deployment and environment recovery.
- Contributed to modernizing the LScript Wi-Fi security toolkit (Python 2-to-3 migration, dynamic wireless-interface detection) and its published technical documentation.

Digital Forensics – Disk and Metadata Analysis Projects

- Examined disk images using FTK Imager and Autopsy to identify deleted files and extract relevant digital evidence.
- Used ExifTool to analyze file and image metadata during forensic investigations.
- Applied file hashing (MD5) to verify evidence integrity in lab exercises and documented the investigation process.

EDUCATION

Tafila Technical University *10/2022 – 06/2026*

Bachelor's Degree in Cybersecurity | Tafila, Jordan

GPA: 81.07/100 – Very Good

Relevant Coursework: Digital Forensics, Malware Analysis, Ethical Hacking, Cryptography, Risk Management, Computer Networks

LANGUAGES

Arabic: Native

English: Professional Working Proficiency (B2)
